Frank Chester shows
his heart architecture
in Santa Cruz !

Based on the geometry underlying the human heart, this building could be a center in America for art and spiritual science, Frank Chester told a bedazzled audience of 40 at the Santa Cruz Waldorf School on January 13th.

He described how the forms of the first Goetheanum were turned inside out for the second building and showed how he had metamorphosed those forms for this one. The Tourmaline shaped framework will a) have colored glass that allows sunlight to give the walls a rare changing color, and b) have fine struts

that allow the wind to create subtle musical tones.

More details will be available at:
